18 **IN RE: BARD IVC FILTERS**  
 19 **PRODUCTS LIABILITY LITIGATION**

20 No. MD-15-02641-PHX-DGC

21 **RESPONSE TO DEFENDANTS'**  
**NOTICE OF SUPPLEMENTAL**  
**INFORMATION REGARDING FDA**  
**INSPECTION AND WARNING**  
 22 **LETTER**

23 On March 4, 2016, Defendants C.R. Bard, Inc. and Bard Peripheral Vascular, Inc.  
 24 filed a Notice of Supplemental Information Regarding FDA Inspection and Warning  
 25 Letter ("Notice") [Doc. 989]. Therein, they notify the Court that the Food and Drug  
 26 Administration ("FDA") has issued two more Form 483 Letters (letters that specify  
 27 actionable conditions identified during FDA inspections) to Defendants arising out of  
 28 recent inspections of their IVC filter facilities. Defendants contend that these newest FDA  
 allegations have "little" relevance but admit they "may warrant a short follow-up  
 Rule 30(b)(6) deposition." Notice at 2. Defendants' casual minimization of the relevance  
 of the FDA's concerns with and scrutiny of Bard's IVC filters notwithstanding, these new  
 events further demonstrate why this Court should not preclude Plaintiffs from taking  
 discovery regarding the FDA's investigations, communications, and conclusions  
 (including the violations found in the Warning Letter) regarding Defendants' IVC filters  
 and facilities.

1        The FDA issued the two newest Form 483 Letters to Defendants on February 26,  
 2 2016 and March 2, 2016.<sup>1</sup> The first letter identifies two separate “observations,” both of  
 3 which relate to Defendants’ collection and reporting of “complaint rates.” While  
 4 Defendants suggest that the FDA’s concern has solely to do with the “written procedure”  
 5 for complaint trending [Notice at 2], the FDA actually criticizes Defendants’ calculation  
 6 methodology and finds that Defendants did not actually perform certain reviews despite  
 7 Defendants’ claim to having done so.<sup>2</sup> Contrary to Defendants’ contentions, this is not a  
 8 mere documentation issue. Rather, the FDA appears to have discovered yet another  
 9 instance of inaccurate (and possibly false) reporting by Defendants regarding adverse  
 10 event complaints for IVC filters.

11        As discussed in Plaintiffs’ Memorandum Regarding Relevancy and Discoverability  
 12 of FDA Inspection and Warning Letter and Recovery Cone Removal System  
 13 (“Memorandum”) [Dkt. No. 697], Defendants’ inaccurate and under-reporting of  
 14 complaint- and failure rates for its IVC filters to the FDA and to the public at large  
 15 (through the MAUDE database) is relevant to virtually every claim in the Master  
 16 Complaint. Reporting and publication of accurate failure rates for Defendants’ IVC filters  
 17 are directly relevant to the safety of those products and liability under both the risk-benefit  
 18 and consumer-expectations tests for Plaintiffs’ product-liability claims. Those rates also  
 19 relate to the reasonableness of Defendants’ actions in the design of their devices and the  
 20 warnings given about them. Moreover, Plaintiffs and their physicians rely on the publicly  
 21 reported information from Defendants. To the extent that Defendants have misreported  
 22 (or under-reported) adverse event information, those actions are relevant to Plaintiffs’  
 23 claims for failure to warn, fraud, misrepresentation, state statutory consumer fraud and  
 24

---

25 <sup>1</sup> Defendants produced the two Form 483 Letters to Plaintiffs on March 11, 2016.  
 26 Defendants have produced no other information relating to the letters or the FDA  
 27 inspections that culminated in them.

28 <sup>2</sup> The second Observation concludes that not all complaint files had been adequately  
 29 reviewed and that, even though the complaint files indicated Defendants had performed an  
 30 Early Detection Systems (EDS) review, such a review could not have been performed  
 31 because there was no data to provide the numerator for such calculations.

1 deceptive practices actions, and punitive damages.<sup>3</sup> And, the facts bear on several of  
 2 Defendants' affirmative defenses, including the Learned Intermediary doctrine, adequacy  
 3 of warnings, and acceptance of risk, among others.

4       The second Form 483 Letter appears, on its face, to relate to Defendants' failure to  
 5 perform certain tests in accordance with required protocols. This failure relates to at least  
 6 six generations of IVC filters at issue in this MDL – Recovery, G2, G2X, Eclipse,  
 7 Meridian, and Denali. At this point, Plaintiffs simply cannot determine one way or  
 8 another whether the FDA's findings on these issues are relevant. It is possible that  
 9 Defendants' testing failures relate to the design issues with respect to virtually all of the  
 10 filters in this litigation; or, the testing failures could be utterly irrelevant. Defendants  
 11 suggest the failures relate to filter cleanliness inspections and that “[n]othing in the Letter  
 12 suggests that the alleged deficiency impacts the integrity of Bard's IVC filters or  
 13 otherwise impacts Plaintiffs' manufacturing defect claims.” Notice at 2. But, they  
 14 provide no evidence to support that claim, and only discovery can provide Plaintiffs the  
 15 evidence to determine whether that is the case.

16       No prior discovery has been taken on these matters (in this MDL, the pre-MDL  
 17 cases, or any state-court case). Plaintiffs should have the opportunity to discover the facts  
 18 relating to the FDA's inspections, findings, and actions with respect to the filters at issue  
 19 in this MDL. Like the prior FDA Form 483 Letters and the Warning Letter, these most  
 20 recent actions by the FDA relate to the filters at issue in this MDL and are relevant to the  
 21 claims in the Master Complaint.

23       ///

24       ///

---

25  
 26       <sup>3</sup> Again, Defendants appear to suggest that their internal reporting “is most important.”  
 27       Notice at 2-3. But, as noted in Plaintiffs' Memorandum [10-11], Bard does not share its  
 28       internal information and rates with the public or the FDA. And, patients and their  
      physicians rely on the accuracy of the publicly reported information. Thus, both the  
      internal and the external reporting by Defendants are relevant.

1 RESPECTFULLY SUBMITTED this 18th day of March 2016.
